

## **Instructions for Getting Solar Panel Permits**

1. We need printed copies of the construction drawings and an engineer's structural analysis of the roof (if the installation is not ground-mounted).
2. Once those have been approved, we will need a copy of the company's business license, as well as the electrician's business license and state license information.
3. All that information is brought into the office, and we will issue the permit. Cost is \$50.
